Industrial Manufacturing Technician (IMT) Apprenticeship Program
Workforce Training Support

In this challenging time, we are experiencing a changing workforce. Company needs for a skilled workforce and job-seekers looking for employment or to change careers will highlight the need for workforce training, especially in manufacturing fields.

CCAC sponsors a Pennsylvania registered IMT Apprenticeship Program. It is a hybrid program that includes technical instruction (which can be completed virtually during this time) and on-the-job training.

Funds are currently available to support the program fee.

Why the Industrial Manufacturing Technician (IMT) Apprenticeship Program?

- To meet manufacturing firms’ needs to upgrade the skills of incumbent and entry-level workers
- IMT on-the-job training and related technical instruction are relevant in wide-ranging manufacturing settings and can be customized to unique needs
- To develop a sustainable way to build a workforce and retain employees
- Apprenticeships are “learn while you earn” programs that reduce employer costs, improve operations and lead to a well-skilled and diverse workforce
